# **HTML 5 TAGS**

# **NEW HTML 5 TAGS**

<article></article>	self-contained composition that is independently distributable	<menuitem/>	specifies a command that a user can invoke from a popup menu
<aside></aside>	section of page that consists of content tangentially related to content around it	<mark></mark>	marked text
<audio></audio>	sound content	<meter></meter>	measurement in defined range
		<nav></nav>	navigation links
<bdi></bdi>	span of text to be isolated from surroundings for bidirectional formatting purposes	<output></output>	represents results of calculation
<canvas></canvas>	area that can be used to draw graphics	<pre><pre><pre><pre><pre><pre><pre><pre></pre></pre></pre></pre></pre></pre></pre></pre>	progress of any kind of task
	via JavaScript	<rb></rb>	marks the base text component of a ruby annotation.
<command/>	user invokable command	<rp></rp>	parenthesized ruby text
<datalist></datalist>	dropdown list	<rt></rt>	ruby text
<datatemplate></datatemplate>	data template	<rtc></rtc>	marks a ruby text container for ruby text
<details></details>	details of an element	<110>	components in a ruby annotation
<dialog></dialog>	specifies that part of an application is interactive	<ruby></ruby>	ruby annotations
<embed/>	embedded content	<section></section>	section in a document
<figcaption></figcaption>	caption of figure element	<source/>	media resources
		<summary></summary>	header of a detail element
<figure></figure>	group of media content	<template< th=""><th>declares HTML fragments that can be cloned</th></template<>	declares HTML fragments that can be cloned
<footer></footer>	footer for section or page		and inserted in the document by script.
<header></header>	header for section or page	<time></time>	date/time
<hgroup></hgroup>	group of headings for section	<track/>	specifies a text track for media such as video and audio
<keygen/>	generated key in a form	<video></video>	video
<main></main>	specifies the main content area of an HTML document	<wbr/>	possible line break

# **OLD UNSUPPORTED TAGS**

<acronym></acronym>	acronym
<applet></applet>	applet
<basefont/>	base font
<bgsound/>	background sound
<big></big>	big text
<center></center>	centered text
<fn></fn>	footnotes
<font></font>	text font, size, and color
<frame/>	sub window
<frameset></frameset>	set of frames

<isindex/>	provides searchable index related to current document
<dir></dir>	directory list
<noembed></noembed>	no embed section
<noframes></noframes>	no frame section
<s></s>	strikethrough text
<strike></strike>	strikethrough text
<tt></tt>	teletype text
<u></u>	underlined text
<xmp></xmp>	preformatted text

# **EXISTING HTML 5 TAGS**

	comment
	document type
<a></a>	hyperlink
<abbr></abbr>	abbreviation
<address></address>	address element
<area/>	Image map area
<b></b>	bold text
<base/>	base URL for all links in page relative to document root
<bdo></bdo>	text direction
<blockquote></blockquote>	long quotation
<body></body>	body element
	single line break
<button></button>	push button
<caption></caption>	table caption
<cite></cite>	citation
<code></code>	code text
<col/>	attributes for columns
<colgroup></colgroup>	groups of columns
<dd></dd>	definition of description
<del></del>	deleted text
<div></div>	generic block-level element
<dfn></dfn>	defining instance of a term
<dl></dl>	definition list
<dt></dt>	definition term
<em></em>	emphasized text
<fieldset></fieldset>	logically group items in a form
<form></form>	defines a form
<h1> to <h6></h6></h1>	header 1 to header 6

# Existing Attributes In HTML4 & 5

A list of existing attributes that are support in both HTML4 & HTML 5

onabort	abort event	onmouseout	mouse cursor exited event
onbeforeunload	before unload event	onmouseover	mouse cursor entered event
onclick	mouse clicked event	onmouseup	mouse button released event
ondblclick	mouse double-clicked event	onmove	move event
ongesturechange	gesture change event	onorientationchange	device orientation changed event
ongestureend	end of gesture event	onpaste	paste event
ongesturestart	start of gesture event	onresize	resize event
onkeydown	key pressed down event	ontouchcancel	touch canceled event
onkeypress	key pressed event	ontouchend	touch ended event
onkeyup	key released event	ontouchmove	touch move event
onmousedown	mouse button pressed down event	ontouchstart	touch started event
onmousemove	mouse moved event		

# HTML 5 Browser Support

Below is a table showing the individual browser support specifications for each of the major web browsers in both desktop and mobile. We have given an over all percentage score on each browser, based on scores gathered by html5test.com

# Event Handler Content Attributes

HTML 4 added the ability to let events trigger actions in a browser, like starting a JavaScript when a user clicks on an element.

Below are event handler attributes that can be added to HTML elements to define event actions.

onbeforeonload	before onload event	onloadeddata	media data is loaded
oncanplay	media can start play	onloadedmetadata	duration of media element is loaded
oncanplaythrough	ı media can be played to end	onloadstart	browser starts to load media data
oncontextmenu	context menu is triggered	onmessage	element is invalid
ondrag	element is dragged	onmousewheel	mouse wheel is being rotated
ondragend	at the end of drag operation	onpause	media data is paused
ondragenter	element dragged on drop target	onplay	media data is going to start playing
ondragleave	element leaves valid drop target	onplaying	media data has started playing
ondragover	element is dragged over drop target	onprogress	browser is fetching media data
ondragstart	at the start of drag operation	onratechange	media data's pplaying rate has changed
ondrop	dragged element is being dropped	onscroll	element's scrollbar is being scrolled
ondurationchange	length of media is changed	onseeked	element's seeking attribute is not true
onemptied	media resource element becomes empty	onseeking	element's seeking attribute is true
onended	media has reached end	onstalled	there is error in fetching media data
onerror	error occurs	onstorage	document loads
onformchange	form changes	onsuspend	browser has stopped fetching media data
onforminput	form gets user input	ontimeupdate	media changes its playing position
onhaschange	document has changed	onvolumechange	media changes volume, also when mute
oninput	message is triggered	onwaiting	media has stopped playing
oninvalid	element gets user input		

The HTML <canvas> element is used to draw graphics, on the fly, via scripting (usually JavaScript). The <canvas> element is only a container for graphics. You must use a script to actually draw the graphics.

Canvas has several methods for drawing paths, boxes, circles, text, and adding images.

# **CANVAS ELEMENT**

### **ATTRIBUTES**

Name	Туре	Default	
Width	Unsigned Long	300	
Height	Unsigned Long	150	

# **METHODS**

Return	Name
String	toDataURL( [Optional] string type, [Variadic] any args)
Object	getContext9 string contextId)

# **2D CONTEXT**

### **ATTRIBUTES**

Name	Туре
Canvas	HTMLCanvasObject [readonly]
METHODS	
Return	Name

# **TRANSFORMATION**

Void restore()

# **METHODS**

Return	Name
Void	scale(float x, float y)
Void	rotate (float x, float y)
Void	transform( float m11, float m12, float m21, float m22, float dx, float dy)
Void	setTransform( float m11, float m12, float m21, float m22, float dx, float dy)

# **IMAGE DRAWING**

### **METHODS**

Return

netum	Name
Void	drawlmage(
	Object image
	float dx, float dy,
	[Optional] float dw, float dh)

Name

Argument "image" can be of type HTMLImageElement, HTMLCanvasElement or HTMLVideoElement

Void drawlmage(

float sx, float sy, float sw, float sh, float dx, float dy, float dw, float dh)

**COLORS, STYLES AND SHADOWS** 

### **ATTRIBUTES**

Name	Туре	Default
strokeStyle	any	black
fillStyle	any	black
shadowOffsetX	float	0.0
shadowOffsetY	float	0.0
shadowBlur	float	0.0
shadowColor	string	transparent black

### **METHODS**

Return	Name
CanvasGradient	createLinearGradient( float x0, float y0, float r0, float x1, float y1, float r1)
CanvasPattern	createPattern( Object image, string repetition)

Argument "image" can be of type HTMLImageElement, HTMLCanvasElement or HTMLVideoElement "repetition" supports any of the following values: [repeat (default), repeat-x, repeat-y, no-repeat]

### **CANVASGRADIENT INTERFACE**

Return	Name
Void	addColorStop(
	float offset, string color

The HTML <canvas> element is used to draw graphics, on the fly, via scripting (usually JavaScript). The <canvas> element is only a container for graphics. You must use a script to actually draw the graphics.

Canvas has several methods for drawing paths, boxes, circles, text, and adding images.

# **PATHS**

### **METHODS**

Return	Name
Void	beginPath()
Void	closePath()
Void	fill()
Void	stroke()
Void	clip()
Void	moveTo( float x, float y)
Void	lineTo( float x, float y)
Void	quadraticCurveTo( float cpx, float cpy, float x, float y)
Void	bezierCurveTo( float cp1x, float cp1y, float cp2x, float cp2y, float x, float y)
Void	arcTo( float x1, float y1, float x2, float y2, float radius)
Void	arc( float x1, float y1, float radius) float startAngle, float endAngle, boolean anticlockwise)
Void	rect (float x, float w, float h) isPointInPath( float x, float y)

# **PIXEL MANIPULATION**

## **METHODS**

Return	Name
ImageData	createlmageData( float sw, float sh)
ImageData	createImageData( ImageData
imagedata) ImageData void	getImageData( ImageData imagedata, float dx, float dy, [Optional] float dirtyX, float dirtyY, float dirtyWidth, float dirtyHeight)

# ImageData interface

height unsigned long [readonly]	
data CanvasPixelArray [readonly]	

# TEXT

### **ATTRIBUTES**

Name	Туре	Default
font	String	10px sans-serif
textAlign	String	start

Supports any of the following values: [start, end, left, right, center]

textBaseline String alphabetic

Supports an of the following values: [top, hanging, middle, alphabetic, ideographic, bottom]

### **METHODS**

Return	Name
Void	fillText( string text, float x, float y, [Optional] float maxWidth)
Void	strokeText( string text, float x, float y, [Optional] float maxWidth)
TextMetrics	measureText( string text)

### TextMetrics interface

width float [readonly]

# **RECTANGLES**

# **METHODS**

Return	Name
Void	clearRect( float x, float y, float w, float h)
Void	fillRect( float x, float y, float w, float h)
Void	strokeRect(
Void	float x, float y, float w, float h)

The HTML <canvas> element is used to draw graphics, on the fly, via scripting (usually JavaScript). The <canvas> element is only a container for graphics. You must use a script to actually draw the graphics.

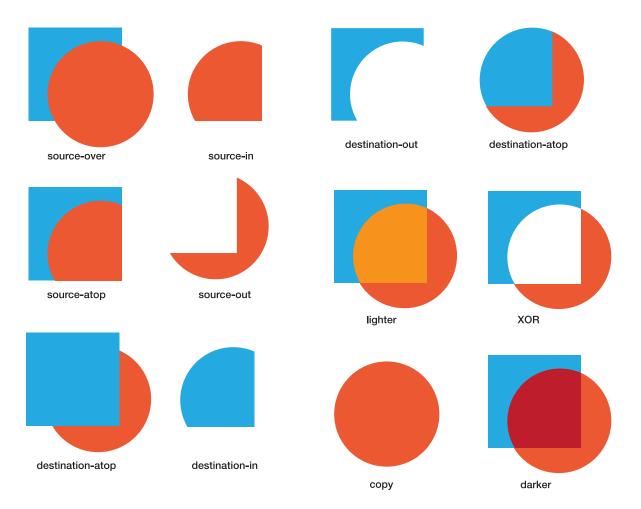

Canvas has several methods for drawing paths, boxes, circles, text, and adding images.

# **CANVAS ELEMENT**

### **ATTRIBUTES**

Name	Туре	Default
gloabalAlpha	Float	1
gloabalCompositeOperation		
	String	Source-over

### Supports any of the following values:

The HTML <canvas> element is used to draw graphics, on the fly, via scripting (usually JavaScript). The <canvas> element is only a container for graphics. You must use a script to actually draw the graphics.

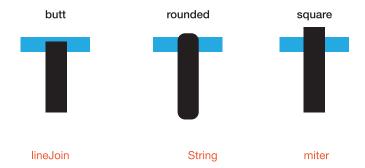

Canvas has several methods for drawing paths, boxes, circles, text, and adding images.

# **LINE STYLES**

### **ATTRIBUTES**

Name	Туре	Default
lineWidth	Float	1
lineCap	String	Butt

### Supports any of the following values:

# Supports any of the following values:
